SUMMARY

Final-year B.Tech student in AI & Data Science building hands-on projects across HR-tech, healthcare, EdTech, and fraud analytics — covering the full pipeline from data cleaning and exploratory analysis through model building, evaluation, and tuning.

EDUCATION

B.Tech, Artificial Intelligence & Data Science (AIDS)

Anand Institute of Higher Technology | Sep 2023 – May 2027 | CGPA: 7.93

SKILLS

Languages	Python, C++, SQL
Data & ML	Exploratory Data Analysis (EDA), Machine Learning, Model Evaluation & Tuning
Libraries	Pandas, NumPy, scikit-learn, Matplotlib
Currently building	Data Structures & Algorithms (4-week study plan), AWS basics

PROJECTS

Resume-to-Interview Gap Analyzer (HR-Tech)

- Built a rule-based scoring engine (moved off a paid-LLM approach) to score resume-to-interview readiness
- Synthetic dataset generator plus a 5-chart EDA pass; skill priority weighting and overclaim detection
- Logistic Regression & Random Forest classifiers, evaluated via confusion matrix and feature importance
- Shipped as a runnable pipeline with a GitHub README and embedded screenshots

Patient Readmission Prediction (Healthcare Analytics)

- Predicted patient readmission risk and stratified patients into Low / Medium / High risk bands
- Added a SHAP-based explainability layer to surface key drivers behind each prediction

Student Performance Analysis (EdTech)

- End-to-end ML pipeline: problem statement, data cleaning, EDA, model building, and evaluation
- Delivered as a full repo — scripts, notebook, README with chart screenshots, requirements.txt

Fraud Detection Analysis (FinTech)

A transaction-data project applying exploratory analysis and classification models to flag potentially fraudulent activity.

- Analyzed transaction data with EDA to characterize normal vs. suspicious activity patterns
- Applied ML classification with model evaluation & tuning to balance precision and recall
